## 3 Release Notes

### 3.2.7 – 3.2.7349.27820

- Reservation Request: Fixed a bug causing reservations not to be removed from the room after a decline
- Reservation Request: Fixed a bug causing reservations to fail to be made on the room after an accept
- **NEW:** We now support Subject Synchronisation between Outlook (Exchange) and TOPdesk\*
- Mail Template: Template is now also automatically copied to instance folder at startup (if none exist in target location)
- Logging: Improved various logging items for easier troubleshooting

### 3.2.0-6 – Previous versions

- **NEW:** oAuth now supported\*

## 4 Known Issues

### 3.2.7 – 3.2.7349.27820

- Recurring Reservation: After having made a recurring reservation from Outlook (Exchange) and then moving it to another day, can cause unexpected behaviour in updating the reservation in TOPdesk

## 5 Highlevel Test Report

The chart below shows which (high level) tests we have done on this release. Each cell corresponds to a scenario list. Each test in this list needs to be successful in order for it to show as "OK" in green.

Over time these scenario lists will be expanded with new ways and circumstances to test the functionality becoming more and more reliable.
